

[Fixed] Windows Update Error Code 800f020b

Error Code 800f020b is common for all the Windows Operating systems when you try to install the windows update. Windows Update error usually appears when Windows 10 or [Windows update](#) system is broken or there is network related issues and concerns. Usual causes for this error are communication failure over the internet with Microsoft update servers.

Firstly, I will suggest you to do [Windows Troubleshoot](#) for Error Code 800f020b. After that, Disable the proxy internet connection and try again to install windows update.

Following these steps carefully will not make any changes to your personal data or [office programs](#). It will only reset the Windows update services.

1. Firstly, open Command Prompt as Administrator by right clicking on it
2. Secondly, go to c:\windows\[SoftwareDistribution](#)
3. Now rename software distribution folder to old
4. Some cases it may not happen until you stop the windows update services
5. To stop that run a command line "Net stop wuauclt" and hit Enter
